Vendor: Microsoft Exam Code: 70-981 Exam Name: Recertification for MCSE: Private Cloud

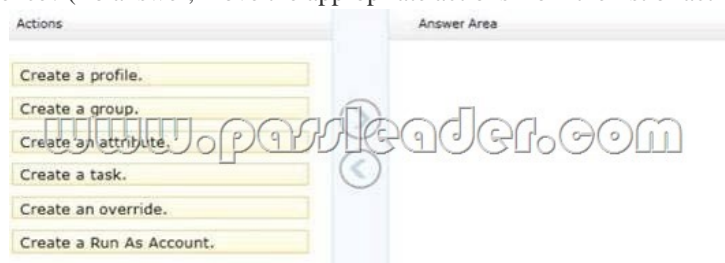

QUESTION 1 Your company deploys System Center 2012 R2 Operations Manager. A network administrator deploys the Operations Manager agent to all of the internal servers that run Windows Server, and then configures notifications to be sent by email to several departmental groups. Two days later, a network administrator opens the Operations Manager console and discovers hundreds of alerts. The administrator closes all of the alerts in the console. You need to change the resolution state of the alerts that were closed. What should you do first? A. From the Reporting workspace, select Microsoft Generic Report Library, and then select Alerts. B. From the Authoring workspace, select Rules, and then set the scope to View all targets. C. From the My Workspace workspace, create a new alert view. D. From the Administration workspace, create a notification subscription. Answer: C

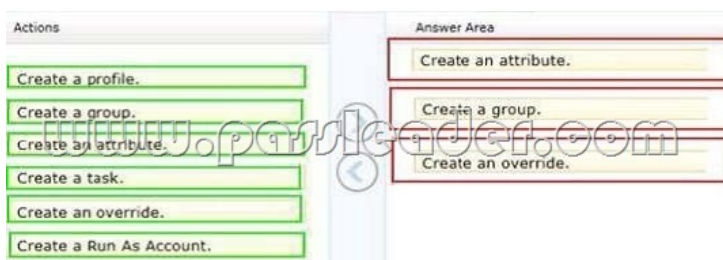

QUESTION 2 Your company has a private cloud that contains a System Center 2012 R2 infrastructure. You run applications virtually by using Hyper-V hosts. Each application has a dedicated virtual machine on a Hyper-V host. The Microsoft Monitoring Agent is deployed to all physical servers. Currently, all of the physical servers are monitored for memory, CPU, and disk space use. You need to monitor the memory, CPU, and disk space use of each application server. What should you do? A. Deploy the Microsoft Monitoring Agent to each virtual machine. B. Configure a new notification subscription for each Hyper-V host. C. Deploy the Configuration Manager client to each virtual machine. D. Configure a new channel for each virtual machine. Answer: A

QUESTION 3 Your network contains an Active Directory domain named contoso.com. The domain contains a domain controller named DC1 and member servers named Server1 and Server2. Server1 has System Center 2012 R2 Operations Manager installed. Server2 has System Center 2012 R2 Orchestrator installed. Orchestrator has the System Center Integration Pack for System Center 2012 R2 Operations Manager installed. In Operations Manager, you have a monitor named Monitor1 that triggers an alert named Alert1. You need to ensure that when Alert1 is triggered, a custom runbook starts. Which two actions should you perform from Orchestrator? Each correct answer presents part of the solution. A. Configure a filter of PrincipalName equals Alert1. B. Configure a filter of MonitorObjectName equals Monitor1. C. Add the Get Alert activity. D. Add the Monitor Alert activity and configure triggers for the alert. E. Configure a filter of Name equals Alert1. Answer: BD

QUESTION 4 Drag and Drop Question Your company has a private cloud that is managed by using a System Center 2012 infrastructure. The private cloud contains 200 servers that run Windows Server 2008 R2. All of the servers are managed by Operations Manager. The private cloud contains an application named App1 that is deployed on-demand to several servers. The servers that run the application are identified by a registry value set during the application's installation. You create a monitor that targets all of the servers. You need to modify the monitor to only affect the servers that have the application installed. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

QUESTION 5 Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure. The network contains several routers and switches. You open the Network Devices view and discover that a switch is in a critical state. You need to identify the availability of the switch during the past seven days. The solution must also ensure that you can review which servers are connected to the switch. What should you use? A. The Network Node Dashboard B. A diagram view C. The Network Vicinity Dashboard D. A state view Answer: A

<http://www.passleader.com/70-981.html>] QUESTION 6 Your company has a private cloud that is managed by using a System Center 2012 Orchestrator, System Center 2012 Operations Manager, and System Center 2012 Service Manager infrastructure. You discover that a service on a server repeatedly stops. You need to configure a solution to remediate the recurring issue automatically. What should you do? A. From Service Manager, configure an incident event workflow. B. From Operations Manager, create a monitor. C. From Service Manager, create an incident template. D. From Operations Manager, configure the CI connector. Answer: B

QUESTION 7 You have a System Center 2012 R2 infrastructure. You plan to implement the Audit Collection Service (ACS). ACS reports will not be available from the Operations Manager console. You need to recommend a solution to view the ACS reports. What should you include in the recommendation? A. A Microsoft SQL Server Reporting Services (SSRS) instance B. A reporting services point in Configuration Manager C. A Reporting data warehouse for Service Manager D. A Microsoft SharePoint Server report library Answer: A

QUESTION 8 Your company has a datacenter in Los Angeles that contains a private cloud. The private cloud is managed by using a System Center 2012 Virtual Machine Manager (VMM) infrastructure. You create a host group named HG1. You move several Hyper-V hosts to HG1. You plan to manage Windows updates for the hosts in HG1 by using VMM. An administrator creates a baseline as shown in the exhibit. (Click the Exhibit button.)

You discover that the updates defined in the baseline are not applied to the hosts in HG1. You need to ensure that the required updates are deployed to the hosts in HG1. What should you do? A. Copy the required updates to the VMM library server. B. Modify the properties of HG1. C. Copy the Virtual Machine template to an alternate location. D. Modify the properties of the baseline. E. Synchronize the Windows Server Update Services (WSUS) server. Answer: D

QUESTION 9 Your company has a private cloud that is managed by using a System Center 2012 infrastructure. The Service Manager management server is installed on a server named Server1. The Configuration Manager site server is installed on a server named Server2. You create a baseline and several configuration items. You need to configure Service Manager to create incidents for each Service Manager Configuration item that is non-compliant with the baseline. What should you create? A. A connector and a Desired Configuration Management Event Workflow B. A channel and a subscription C. A subscription, a connector, and a task D. A task and a Desired Configuration Management Event Workflow Answer: A

QUESTION 10 Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure. The network contains a Microsoft Exchange Server 2010 organization. You plan to import the Exchange Server 2010 Management Pack. You need to configure Operations Manager to send Exchange-related notifications to Exchange Server administrators. What should you create first? A. A channel B. A User Role C. An Exchange Server 2010 Send Connector D. An Exchange Server 2010 transport rule E. A monitor Answer: A Thank You for Trying Our Product, PassLeader Certification Exam Features: ? More than 99,900 Satisfied Customers Worldwide. ? Average 99.9% Success Rate. ? Free Update to match latest and real exam scenarios. ? Instant Download Access! No Setup required. ? Questions & Answers are downloadable in PDF format and VCE test engine format. ? Multi-Platform capabilities - Windows, Laptop, Mac, Android, iPhone, iPod, iPad. ? 100% Guaranteed Success or 100% Money Back Guarantee. ? Fast, helpful support 24x7.
