Case Study 1: Large Company (Question 1 - Questions 10) Background: You are the SharePoint administrator for a large company. You are responsible for installing and configuring a multi-server SharePoint environment that will be used for information management and collaboration. The company has an Active Directory Domain Services (AD DS) domain. User-specific contact information, including employee photos, is stored and managed in Active Directory. All employees are located in the ActiveUsers organizational unit (OU). The User Profile Synchronization service runs on a server named SERVER1. Business Requirements: The SharePoint environment must meet the following business requirements: - Ensure that users can connect to the portal by using the same URL from any location. - Ensure that users can access corporate information from outside the network without using a VPN connection. - Allow users to configure notifications for content changes. - Allow users to follow content creators. - Limit the number of sites and people each user can follow to 100. - Allow content authors to upload documents, large image files, and large video files for consumption by internal and external users. - Allow administrators to promote search query results across the entire company. - Utilize My Sites to share content. - Provide opportunities for social interaction. Technical Requirements: You must meet the following technical requirements for the SharePoint environment: - Do not exceed the minimum hardware specifications. - Install the minimum supported versions of all software on the servers. - Control the growth of storage utilization. - Maximize existing content database usage before creating new content databases. - Store large files on network attached storage (NAS). - Ensure that all web applications, site collections, files, databases, and components stay within the supported limits. - Configure the User Profile Synchronization service to import user profile data from Active Directory. - Grant the User Profile service account the least permissions necessary to read data. - Ensure that current and future SharePoint environments include the most recent software updates. - Use predefined database naming conventions. - Create individual user sites by using the https://contoso.com/personal/path. QUESTION 1 You create a User Profile Synchronization connection. You need to grant the necessary permissions to the synchronization account. What should you do? A. Grant the account Full Control on the ActiveUsers OU. B. Grant the account Full Control on the AuthenticatedUsers AD security group. C. Grant the account Read permission on the domain. D. Grant the account the Replicate Directory Changes permission on the domain. Answer: C QUESTION 2 Hotspot Question You need to ensure that user-selected subscription content automatically appear on users' My Sites. Which configuration option should you choose? (To answer, select the appropriate option in the answer area.)

The screenshot shows the 'User Profile Synchronization' section in the SharePoint administration console. It includes the following options:

- People**
 - Manage User Properties
 - Manage User Profiles
 - Manage User Sub-types
 - Manage Audiences
 - Schedule Audience Compilation
 - Compile Audiences
 - Manage User Permissions
 - Manage Policies
- Synchronization**
 - Configure Synchronization Connections
 - Configure Synchronization Timer Job
 - Configure Synchronization Settings
 - Start/Stop Synchronization
- Organizations**
 - Manage Organization Properties
 - Manage Organization Profiles
 - Manage Organization Sub-types
- My Site Settings**
 - Setup My Sites
 - Configure Trusted Host Locations
 - Manage Promoted Sites
 - Publish Links to Office Client Applications
 - Manage Social Tags and Notes
 - Manage Following

Answer:

People
 Manage User Properties | Manage User Profiles
 Manage User Sub-types | Manage Audiences
 Schedule Audience Compilation | Compile Audiences
 Manage User Permissions | Manage Policies

Synchronization
 Configure Synchronization Connections
 Configure Synchronization Timer Job
 Configure Synchronization Settings | Start Full Synchronization

Organizations
 Manage Organization Properties | Manage Organization Profiles
 Manage Organization Sub-types

My Site Settings
 Setup My Sites | Configure Trusted Host Locations
 Manage Promoted Sites | Publish Links to Office Client Applications
 Manage Social Tags and Notes | Manage Following

QUESTION 3 You need to ensure that content authors can publish the specified files. What should you do?

- A. Create multiple authoring site collections. Create a site that contains lists, document libraries, and a Pages library. Create an asset library in a new site collection, and enable anonymous access to the library on the publishing web application.
- B. Create multiple authoring site collections. Create a site that contains lists, document libraries, and a Pages library. Create an asset library in the authoring site collection, and enable anonymous access to the library on the authoring web application.
- C. Create one authoring site collection. Create a site that contains multiple lists, document libraries, and Pages libraries. Create an asset library in a new site collection, and enable anonymous access to the library on the publishing web application.
- D. Create multiple authoring site collections. Create a site that contains multiple lists, document libraries, and Pages libraries. Create an asset library in a new site collection, and enable anonymous access to the library on the publishing web application.

Answer: B QUESTION 4 You need to import employee photos into SharePoint user profiles by using the least amount of administrative effort. Which three actions should you perform? (Each correct answer presents part of the solution. Choose three.)

- A. Define a mapping for the thumbnailPhoto attribute of the Picture user profile property.
- B. Run the Update-SPUserSolution Windows PowerShell cmdlet.
- C. Run an incremental synchronization of the User Profile Synchronization service.
- D. Run a full synchronization of the User Profile Synchronization service.
- E. Run the Update-SPProfilePhotoStore Windows PowerShell cmdlet.
- F. Define a mapping for the photo attribute of the Picture user profile property.

Answer: ADE QUESTION 5 Drag and Drop Question You need to install the appropriate versions of Windows Server, Microsoft SQL Server, and Microsoft .NET Framework in the server environment. Which operating system and applications should you install? (To answer, drag the appropriate operating systems and applications to the correct server layers in the answer area. Each operating system or application may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Answer Area

| Server layer | Operating system | Application |
|--------------|------------------|-------------|
| Web | | |
| Application | | |
| Database | | |

Available components:

- .NET Framework 4.0
- .NET Framework 4.5
- SQL Server 2008 SP2
- SQL Server 2008 R2 SP1
- SQL Server 2012
- Operating system
- Windows Server 2008 SP2
- Windows Server 2008 R2 SP1

Answer:

| Answer Area | | |
|--------------|----------------------------|------------------------|
| Server layer | Operating system | Application |
| Web | Windows Server 2008 R2 SP1 | .NET Framework 4.5 |
| Application | Windows Server 2008 R2 SP1 | .NET Framework 4.5 |
| Data/data | Windows Server 2008 R2 SP1 | SQL Server 2008 R2 SP1 |

QUESTION 6 You copy the content of the SharePoint installation media and software updates to your hard drive. You need to meet the setup requirements for future SharePoint server installations. What should you do? A. Extract the content of each file to the Updates folder by running the /extract:<path> command. B. Upgrade the installation media by running the /lang:<lcid> command. C. Extract the content of each file to the Setup folder by running the /extract:<path> command. D. Extract the content of each file to the PrerequisiteInstallerFiles folder by running the /extract:<path> command. Answer: A

QUESTION 7 You need to implement corporate sizing and performance guidelines for general usage. Which three actions should you perform? (Each correct answer presents part of the solution. Choose three.) A. For the Remote BLOB Storage (RBS) storage subsystem on network attached storage (NAS), limit the maximum time-to-first-byte (TTFB) of any response from the NAS to 100 milliseconds. B. Limit the maximum size of each content database to 4 TB. C. For the Remote BLOB Storage (RBS) storage subsystem on network attached storage (NAS), limit the maximum time-to-first-byte (TTFB) of any response from the NAS to 20 milliseconds. D. Limit the number of documents in each document library to 20 million. E. Limit the number of documents in each content database to 10 million. F. Limit the maximum size of each content database to 200 GB. Answer: CEF

Case Study 2: Photo Processing (Question 11 - Questions 25) Background General Background: You are a SharePoint administrator for an online photo-processing company named Contoso, Ltd. Contoso's primary customers are professional photographers. The Contoso SharePoint 2013 environment includes the sites described in the following table.

| Description | URL |
|----------------|----------------------|
| Public website | www.adatum.com |
| Intranet site | intranet.contoso.com |

The intranet site includes a document library for each employee in which the employee stores photos. Technical Background: The SharePoint environment contains five front-end web servers that use Windows Network Load Balancing (NLB) with NLB affinity set to None. The company maintains all processed photos in the SharePoint content database. The content database uses RAID 5 storage. Photo files that are more than one year old are rarely viewed. Employees actively use the default self-service site creation feature. The network infrastructure contains an Active Directory Domain Services (AD DS) environment. All servers run Windows Server 2008 R2. The internal AD DS domain is named contoso.com. Active Directory Federation Services (AD FS) is deployed in the LAN. Two AD FS proxy servers are deployed in the perimeter network. Users log on to client computers by using the syntax username@contoso.com. Contoso has a lab environment that includes a dedicated AD DS environment and SharePoint 2013. The main lab SharePoint site is located at lab.intranet.contoso.com. A test site for a project named Project2 exists under lab.intranet.contoso.com/corp. The default self-service site creation feature is enabled for the test site. Contoso has a development team that maintains the public website, maintains the intranet site, and creates SharePoint apps. The development team recently created a SharePoint-hosted app named App1 that converts .tif files to .png files. Future Development: Contoso is forming a new corporation named Proseware, Inc. that will sell SharePoint apps. The company has acquired the proseware.com domain name. Contoso is preparing to federate with Microsoft Office 365 and will use the proseware.com domain for Office 365 services. Technical Requirements: You must meet the following technical requirements: - App1 must have access to each employee's photo document library. - App1 must use Windows Authentication. - Each front-end web server must use a single IP address for

all SharePoint sites and apps on that server. - All SharePoint sites and apps must listen on port 9000. - Office 365 must use single sign-on (SSO). The company has established the following new monitoring requirements for the production SharePoint environment: - Monitor whether a large number of documents are checked out. - Monitor whether a large number of unpublished items are being requested. The company has established the following new monitoring requirements for Project2: - Monitor changes to a value in a specific registry key. - Monitor the SharePoint cache hit ratios. - Perform monitoring only from 9:00 A.M. to 3:00 P.M. daily. Existing Problems: Multiple authentications often occur when users log on to and navigate in SharePoint. Users have reported some small delays accessing data. The content database is currently stored on Serial Attached SCSI (SAS) disk drives and is growing at a rapid pace. The following related issues currently exist: - SharePoint is not performing as well as it was when the content database was smaller. - Storage costs to house the photo files are too expensive. - Scanned contracts are stored in binary large object (BLOB) cache storage. The BLOB cache is routinely filling up. End users are reporting poor performance when viewing scanned contracts. **QUESTION 11 Hotspot Question** You need to choose the Performance Monitor counter to use to meet the new monitoring requirements for the production environment. Which performance counter should you use? (To answer, select the appropriate counter in the answer area.)

SharePoint Publishing Cache

- Publishing cache flushes / second
- Publishing cache hit count
- Publishing cache hit ratio
- Publishing cache hits / sec
- Publishing cache miss count
- Publishing cache misses / sec
- Total number of cache compactions

Answer:

SharePoint Publishing Cache

- Publishing cache flushes / second
- Publishing cache hit count
- Publishing cache hit ratio
- Publishing cache hits / sec
- Publishing cache miss count
- Publishing cache misses / sec
- Total number of cache compactions

QUESTION 12 Drag and Drop Question You need to design a SharePoint storage architecture to resolve the existing storage issues. Which storage architecture should you use? (To answer, drag the appropriate storage types to the correct location or locations in the answer area. Each storage type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

| | Content | Storage type |
|---|-----------------------------|--------------|
| RAID 10 storage on Serial ATA (SATA) disk drives | SharePoint content database | |
| RAID 10 storage on Fibre Channel (FC) disk drives | Photo files | |
| Remote BLOB Storage on Serial ATA (SATA) disk drives | | |
| Remote BLOB Storage on Fibre Channel (FC) disk drives | | |

Answer:

| | Content | Storage type |
|---|-----------------------------|--|
| RAID 10 storage on Serial ATA (SATA) disk drives | SharePoint content database | RAID 10 storage on Fibre Channel (FC) disk drives |
| RAID 10 storage on Fibre Channel (FC) disk drives | Photo files | Remote BLOB Storage on Serial ATA (SATA) disk drives |
| Remote BLOB Storage on Serial ATA (SATA) disk drives | | |
| Remote BLOB Storage on Fibre Channel (FC) disk drives | | |

QUESTION 13 You need to create a new site collection while maintaining the ability for users to create their own sites. What should you do? A. Use a path-based site collection and a single farm that contains all the web applications. B. Create a host-named site collection and use a single farm that contains all the web applications. C. Use a path-based site collection and alternate access mappings. D. Create a host-named site collection and use a single farm that contains a single consolidated web application. Answer: B

QUESTION 14 You need to meet the Project2 monitoring requirements. What should you do? A. Create a user-defined data collector set. B. Monitor only startup event trace sessions. C. Monitor only event trace sessions. D. Use a system-defined data collector set. Answer: A

QUESTION 15 Hotspot Question You are configuring the IIS website settings for a SharePoint application in the Create New Web Application wizard. You need to ensure that the settings meet the technical requirements. Which configuration option should you change? (To answer, select the appropriate option in the answer area.)

IIS Web Site

Choose between using an existing IIS web site or create a new one to serve the Microsoft SharePoint Foundation application.

If you select an existing IIS web site, that web site must exist on all servers in the farm and have the same name, or this option will not succeed.

If you opt to create a new IIS web site, it will be automatically created on all servers in the farm. If an IIS setting that you wish to change is not shown here, you can use this option to create the basic site, then update it using the standard IIS tools.

Use an existing IIS web site
Default Web Site

Create a new IIS web site

Name
SharePoint - App1

Port
9000

Host Header
intranet.contoso.com

Path
d:\data\app1

Answer: **IIS Web Site**

Choose between using an existing IIS web site or create a new one to serve the Microsoft SharePoint Foundation application.

If you select an existing IIS web site, that web site must exist on all servers in the farm and have the same name, or this option will not succeed.

If you opt to create a new IIS web site, it will be automatically created on all servers in the farm. If an IIS setting that you wish to change is not shown here, you can use this option to create the basic site, then update it using the standard IIS tools.
