QUESTION 1 You plan to deploy a System Center 2012 infrastructure. You plan to create and deploy a service named CloudService1. You need to recommend a solution to deploy CloudService1 to a Windows Azure subscription. What should you include in the recommendation? A. System Center 2012 Service Manager B. System Center 2012 Orchestrator C. System Center 2012 Operations Manager D. System Center 2012 App Controller Answer: D

QUESTION 2 Developers at Contoso have two Windows Azure subscriptions. Contoso creates a partnership with another company named A. Datum. The A. Datum network contains a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains three clouds. Developers at A. Datum have two Windows Azure subscriptions. You deploy System Center 2012 App Controller at A. Datum. You plan to manage the clouds and the Windows Azure subscriptions for both companies from the App Controller portal. You need to identify the minimum number of subscriptions and the minimum number connections required for the planned management. How many connections and subscriptions should you identify? A. two connections and two subscriptions B. four connections and two subscriptions C. four connections and four subscriptions D. two connections and four subscriptions E. eight connections and four subscriptions Answer: D

QUESTION 3 You have a System Center 2012 Service Manager infrastructure that contains a Self-Service Portal. The corporate network access policy states that users must be assigned the minimum number of permissions to access the network resources. You need to ensure that a user named Testuser5 can create incidents by using the Self-Service Portal. The solution must meet the requirements of the network access policy. Which permissions should you assign to Testuser5 from Site Settings? A. Design B. Full Control C. Read D. Contribute Answer: D

QUESTION 4 Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure. You deploy Microsoft Share Point Foundation 2010. You have an Operations Manager Web Part. You need to ensure that the Web Part is available on the SharePoint site. What should you do first? A. Configure the Web Part solution. B. Deploy the Web Part to the SharePoint site. C. Configure the Web Part to use shared credentials. D. Add the Web Part to a webpage. Answer: B

QUESTION 5 Your network contains an Active Directory forest named contoso.com. You install System Center 2012 Virtual Machine Manager (VMM) on a server named Server1. Users report that they fail to log on to the Virtual Machine Manager Self-Service Portal (VMMSSP). You need to ensure that users call log on to the VMMSSP. What should you do first? A. From the Virtual Machine Manager command shell, run the New-SCUserRole cmdlet and the Set SCUserRole cmdlet. B. From Internet Information Services (IIS) Manager on Server1, modify the Authentication settings. C. From Authorization Manager, create a role definition and a role assignment. D. From the VMM Administrator Console, run the Create Run As Account Wizard Answer: A

QUESTION 6 You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains a server named Server1. A user named User1 attempts to add a Hyper-V host named Server2 to the fabric. User1 enters the IP address of Server2 and receives the following error message: "Access has been denied while contacting the server Server2." You verify that User1 is assigned the Delegated Administrator User Role. You need to ensure that User1 can add Server2 to the fabric. What should you do? A. Assign the Administrator User Role to User1. B. Add User1 to the Domain Admins security group. C. Modify the logon account for the System Center Virtual Machine Manager Agent service on Server1. D. Create a Run As

Account that is a member of the local Administrators group on Server2. Answer: D QUESTION 7 Your company has a datacenter in Los Angeles. The datacenter contains a server named VMM1 that has System Center 2012 Virtual Machine Manager (VMM) installed. You plan to deploy a service named SRV1. SRV1 will contain three tiers. Each tier will contain 8 instances. You need to configure the service template to ensure that when an application in SRV1 is upgraded, SRV1 remains available. What should you configure for each tier? A. the preferred deployment order B. the maximum instance count C. the minimum instance count D. the number of upgrade domains E. the preferred servicing order Answer: D

<http://www.passleader.com/70-247.html>] QUESTION 8 Your company has a private cloud that contains 200 virtual machines. The network contains a server named Server1 that has the Microsoft Server Application Virtualization (Server App-V) Sequencer installed. You plan to sequence, and then deploy a line-of-business web application named App1. App1 has a Windows Installer package named Install.msi. App1 must be able to store temporary files. You need to identify which task must be performed on Server1 before you deploy App1. What task should you identify? A. Add a script to the OSD file. B. Install the Web Server (IIS) server role. C. Modify the environment variables. D. Compress Install.msi. Answer: B QUESTION 9 Your company has a System Center 2012

infrastructure. The infrastructure contains the App Controller and Virtual Machine Manager (VMM) roles. You deploy a service named SRV1 to the production environment in the public cloud. You also deploy SRV1 to a staging environment in the public cloud. You perform upgrades to SRV1 in the staging environment. You need to apply the upgrades from the staging environment to the production environment. What should you do? A. From the VMM Administrator Console, create a new virtual machine template. B. From the App Controller portal, perform an environment swap upgrade. C. From the VMM Administrator Console, create a new service. D. From the App Controller portal, import an SSL certificate. E. From the VMM Administrator Console, create a new service template. Answer: B QUESTION 10 Your network contains a System Center 2012 Virtual Machine Manger (VMM)

infrastructure. The infrastructure contains 50 virtual machines. You need to deploy a Microsoft SQL Server dedicated administrator connection (DAC) package to a service. What should you create from the VMM Administrator Console? A. a Run As account B. a Capability Profile C. a virtual machine template D. an Application Profile Answer: D QUESTION 11 You have a System Center 2012 Virtual Machine Manager (VMIM) infrastructure that contains a server named Server1. Server1 hosts the VMM library. You add a server named Server2 to the network. You install the Windows Deployment Services (WDS) server role on Server2. You have the Install.wim file from the Windows Server 2008 R2 Service Pack 1 (SP1) installation media. You need to install Hyper-V hosts by using the bare-metal installation method. What should you do first? A. Convert Install.wim to a .vmd file. B. Convert Install.wim to a .vhd file. C. Add Install.wim to the VMM library. D. Add Install.wim to the Install Images Container. Answer: B QUESTION 12 You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains 20 virtualization hosts. Each host contains 20 virtual machines. You need to configure the network fabric. The solution must prevent the virtual machines from connecting to a VLAN. What should you do from the Network Site properties? A. set the VLAN ID to 0. B. set the VLAN ID to 10. C. set the IP subnet to FD4A::/32. D. set the IP subnet to 192.168.1.0/20. Answer: A QUESTION 13 You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains a virtualization host named Server2. Server2 runs Windows Server 2008 R2 Service Pack 1 (SP1). Server2 has the Hyper-V server role installed. You plan to deploy a service named Service1 to Server2. Service1 has multiple load-balanced tiers. You need to recommend a technology that must be implemented on Server2 before you deploy Service1. What should you recommend? A. TCP offloading B. the Network Policy and Access Services (NPAS) server role C. the Multipath I/O (MPIO) feature D. MAC address spoofing Answer: D

QUESTION 14 Your company has a private cloud that is managed by a System Center 2012 Virtual Machine Manager (VMM)

infrastructure. The infrastructure contains a server named Server1 that has VMM installed. You plan to deploy the Hyper-V server role to a server named Server2. Server2 runs Windows Server 2008 R2. Server2 is member of a workgroup. You need to add Server2 to the VMM fabric. What should you do? (Each correct answer presents part of the solution. Choose three.)

- A. From the VMM Administrator Console, run the Add Resource Wizard, and then click Windows Server computers in a perimeter network.
- B. From the VMM 2012 installation media, install the VMM agent on Server2.
- C. From the VMM Administrator Console, run the Add Resource Wizard, and then click Windows Server computer in an untrusted Active Directory domain.
- D. Copy the SecurityFile.txt file from Server2 to Server1.
- E. From the Services console on Server1, start the SSDP Discovery service.

F. Copy the ApplicationHost.config file from Server2 to Server1. Answer: ABD QUESTION 15 You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains five virtualization hosts. You add new storage to the network. You need to discover the storage from the VMM Administrator Console. What should you create first?

- A. a Hardware Profile
- B. a classification
- C. a Run As Account
- D. a Guest as Profile

Answer: C Thank You for Choosing PassLeader's Products, We PassLeader Guarantee You: 1) More than 99,900 Satisfied Customers Worldwide. 2) Average 99.9% Success Rate. 3) Free Update to match latest and real exam scenarios. 4) Instant Download Access! No Setup required. 5) Questions & Answers are downloadable in PDF format and VCE test engine format. 6) Multi-Platform capabilities - Windows, Laptop, Mac, Android, iPhone, iPod, iPad. 7) 100% Guaranteed Success or 100% Money Back Guarantee. 8) Fast, helpful support 24x7.
