

(New Version) Learning Passleader Valid Free Microsoft 70-462 Exam Questions To Pass Exam Quickly (11-20)

Attention: These 70-462 Exam Questions Were Updated After 2014/7/1 With The Change Of New Microsoft Exam. 100 Percent Valid And 100 Percent Pass Ensure. Visit Our PassLeader Website And Get All Valid Exam Questions With PDF And VCE.

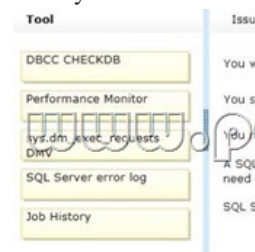

QUESTION 11 You administer a Microsoft SQL Server 2012 database. You provide temporary securityadmin access to User1 to the database server. You need to know if User1 adds logins to securityadmin. Which server-level audit action group should you use?

- A. SERVER_STATE_CHANGE_GROUP B. SERVER_PRINCIPAL_IMPERSONATION_GROUP C. SUCCESSFUL_LOGIN_GROUP D. SERVER_ROLE_MEMBER_CHANGE_GROUP

Answer: D QUESTION 12 You administer a Microsoft SQL Server 2012 instance. You need to stop a blocking process that has an SPID of 64 without stopping other processes. What should you do?

- A. Execute the following Transact-SQL statement: EXECUTE sp_KillSPID 64 B. Restart the SQL Server service. C. Execute the following Transact-SQL statement: KILL 64 D. Execute the following Transact-SQL statement: ALTER SESSION KILL '64'

Answer: C QUESTION 13 Drag and Drop Question You administer a Microsoft SQL Server 2012 server. A variety of issues occur from time to time in the production environment. You need to identify the appropriate tool for each issue. Which tool or tools should you use? (To answer, drag the appropriate tool or tools to the correct issue or issues in the answer area. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Answer:

| Tool | Issue |
|------|--|
| | You want to verify network utilization. |
| | You suspect that a process is being blocked. |
| | You need to verify that the integrity of the database. |
| | A SQL Agent job fails on a specific step, and you need the details of that step. |
| | SQL Server will not start. |

Tools available: Performance Monitor, sys.dm_exec_requests, DMV, DBCC CHECKDB, Job History, SQL Server error log.

QUESTION 14 You administer a Microsoft SQL Server 2012 database. Users report that an application that accesses the database displays an error, but the error does not provide meaningful information. No entries are found in the SQL Server log or Windows event logs related to the error. You need to identify the root cause of the issue by retrieving the error message. What should you do?

- A. Create an Extended Events session by using the sqlserver.error_reported event. B. Create a SQL Profiler session to capture all ErrorLog and EventLog events. C. Flag all stored procedures for recompilation by using sp_recompile. D. Execute sp_who.

Answer: A QUESTION 15 You administer a Microsoft SQL Server 2012 server. One of the databases on the server supports a highly active OLTP application. Users report abnormally long wait times when they submit data into the application. You need to identify which queries are taking longer than 1 second to run over an extended period of time. What should you do?

- A. use SQL Profiler to trace all queries that are processing on the server. Filter queries that have a Duration value of more than 1,000. B. Use sp_configure to set a value for blocked process threshold. Create an extended event session. C. Use the Job Activity monitor to review all processes that are actively running. Review the Job History to find out the duration of each step. D. Run the sp_who command from a query window. E. Run the DBCC TRACEON 1222 command from a query window and review the SQL Server event log.

Answer: E

<http://www.passleader.com/70-462.html>] QUESTION 16 Drag and Drop Question You administer a Microsoft SQL Server database that is used by an application. Users of the application report performance issues. You need to choose the appropriate tool for performance-tuning of SQL Server databases. Which tool or tools should you use? (To answer, drag the appropriate tool or tools to their corresponding task or tasks in the answer area. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

| Tool | Task |
|----------------|---|
| SQL Profiler | Generating alerts |
| System Monitor | Capturing and replaying trace activity |
| XEvents | Identifying cause of high page splits |
| | Troubleshooting cause of high page_io latch |

Answer:

| Tool | Task |
|----------------|---|
| SQL Profiler | Generating alerts |
| System Monitor | Capturing and replaying trace activity |
| XEvents | Identifying cause of high page splits |
| XEvents | Troubleshooting cause of high page_io latch |

QUESTION 17 You administer a Microsoft SQL Server 2012 database. You need to ensure that the size of the transaction log file does not exceed 2 GB. What should you do? A. Execute sp_configure 'max log size', 2G. B. use the ALTER DATABASE...SET LOGFILE command along with the maxsize parameter. C. In SQL Server Management Studio, right-click the instance and select Database Settings. Set the maximum size of the file for the transaction log. D. in SQL Server Management Studio, right-click the database, select Properties, and then click Files. Open the Transaction log Autogrowth window and set the maximum size of the file.

Answer: D QUESTION 18 You administer a Microsoft SQL Server 2012 server. The MSSQLSERVER service uses a domain account named CONTOSOSQLService. You plan to configure Instant File Initialization. You need to ensure that Data File Autogrow operations use Instant File Initialization. What should you do? Choose all that apply. A. Restart the SQL Server Agent Service. B. Disable snapshot isolation. C. Restart the SQL Server Service. D. Add the CONTOSOSQLService account to the Perform Volume Maintenance Tasks local security policy. E. Add the CONTOSOSQLService account to the Server Operators fixed server role. F. Enable snapshot isolation. Answer: CD

QUESTION 19 Drag and Drop Question You administer a single Microsoft SQL Server instance on a two-node failover cluster that has nodes named Node A and Node B. The instance is currently running on Node A. You want to patch both Node A and Node B by using the most recent SQL Server Service Pack. You need to ensure that the following requirements are met: Both nodes receive the update. Downtime is minimized. No data is lost. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

| |
|---|
| Pause Node A. |
| Pause Node B. |
| Failover from Node A to Node B. |
| Start the SQL Server service on both nodes. |
| Install the service pack on Node A. |
| Install the service pack on Node B. |
| Stop the SQL Server services on both nodes. |

Answer:

| |
|---|
| Pause Node A. |
| Pause Node B. |
| Start the SQL Server service on both nodes. |
| Stop the SQL Server services on both nodes. |
| Install the service pack on Node B. |
| Failover from Node A to Node B. |
| Install the service pack on Node A. |

QUESTION 20 You administer a Microsoft SQL Server 2012 failover cluster that contains two nodes named Node A and Node

B. A single instance of SQL Server is installed on the cluster. An additional node named Node C has been added to the existing cluster. You need to ensure that the SQL Server instance can use all nodes of the cluster. What should you do?

A. Run the New SQL Server stand-alone installation Wizard on Node C. B. Run the Add Node to SQL Server Failover Cluster Wizard on Node C. C. Use Node B to install SQL Server on Node C. D. Use Node A to install SQL Server on Node C. Answer: B (New Version) Learning Passleader Valid Free Microsoft 70-462 Exam Questions To Pass Exam Quickly [Click Here To Get The New Update And 100 Percent Valid & Pass 70-462 Exam Questions -- http://www.passleader.com/70-462.html](#)]
