Vendor: Microsoft Exam Code: 70-494 Exam Name: Recertification for MCSD: Web Applications

QUESTION 1 Drag and Drop Question You are developing a WCF service. The service will stream messages to clients on the internal network. You must use Windows Authentication, and all messages must be binary encoded. You need to configure the service. You have the following markup:

```
<system.serviceModel>  
  <bindings>  
    <Target 1>  
      <binding>  
        </binding>  
    </Target 1>  
    <Target 2 />  
    </Target 2 />  
    </Target 3>  
  </bindings>  
</system.serviceModel>
```

Which elements should you include in Target 1, Target 2 and Target 3 to complete the markup? (To answer, drag the appropriate elements to the correct targets the answer area. Each element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content)

Elements	Answer Area
netNamedPipeBinding	Target 1: Element
netTcpBinding	Target 2: Element
wsHttpBinding	Target 3: Element
basicHttpBinding	
mode="None"	
mode="Transport"	
mode="Message"	

Answer:

Elements	Answer Area
netNamedPipeBinding	Target 1: netTcpBinding
netTcpBinding	Target 2: mode="Transport"
wsHttpBinding	Target 3: netTcpBinding
basicHttpBinding	
mode="None"	
mode="Transport"	
mode="Message"	

QUESTION 2 You are building an ADO.NET Entity Framework application. You need to validate the conceptual schema definition language (CSDL), store schema definition language (SSDL), and mapping specification language (MSL) files. Which Entity Data Model tool can you use? (Each correct answer presents a complete solution. Choose all that apply.)

- A. SSDL Generator (Ssdlgen.exe)
- B. EDM Generator (EdmGen.exe)

C. Create Database Wizard D. Entity Data Model Wizard Answer: AD QUESTION

3 You are developing an ASP.NET MVC application. The application provides a RESTful API for third-party applications. This API updates the information for a contact by embedding the information in the URL of an HTTP POST. You need to save the Contact type when third-party applications use the EditContact method. Which code segment should you use? (Each correct answer presents a complete solution. Choose all that apply.)

- A.

```
public ActionResult EditContact(FormCollection values)
{
    var c = new Contact()
    {
        FirstName = values["FirstName"],
        LastName = values["LastName"]
    };
    SaveContact(c);
    return View(c);
}
```
- B.

```
public ActionResult EditContact()
{
    var c = new Contact()
    {
        FirstName = Request.QueryString["FirstName"],
        LastName = Request.QueryString["LastName"]
    };
    SaveContact(c);
    return View(c);
}
```
- C.

```
public ActionResult EditContact(QueryStringValueProvider values)
{
    var c = new Contact()
    {
        FirstName = values.GetValue("FirstName"),
        LastName = values.GetValue("LastName")
    };
    SaveContact(c);
    return View(c);
}
```
- D.

```
public ActionResult EditContact(Contact c)
{
    SaveContact(c);
    return View(c);
}
```

www.pastpaperleader.com

A. Option A B. Option B C. Option C

D. Option D Answer: AB QUESTION 4 You are developing an ASP.NET MVC application that enables you to edit and save a contact. The application must not save contacts on an HTTP GET request. You need to implement the controller. Which code segment should you use? (Each correct answer presents a complete solution. Choose all that apply.)

- A.

```
public ActionResult EditContact(int id, Contact c)
{
    if (this.HttpContext.Request["ActionName"] == "GET")
    {
        c = RetrieveContact(id);
    }

    if (this.HttpContext.Request["ActionName"] == "POST")
    {
        SaveContact(c);
    }
    return View(c);
}
```
- B.

```
[HttpGet]
public ActionResult EditContact(int id)
{
    var c = RetrieveContact(id);
    return View(c);
}

[HttpPost]
public ActionResult EditContact(int id, Contact c)
{
    SaveContact(c);
    return View(c);
}
```
- C.

```
public ActionResult EditContact(int id, Contact c)
{
    if (this.HttpContext.Request.RequestType == "GET")
    {
        c = RetrieveContact(id);
    }

    if (this.HttpContext.Request.RequestType == "POST")
    {
        SaveContact(c);
    }
    return View(c);
}
```
- D.

```
[ActionName("GET")]
public ActionResult EditContact(int id)
{
    var c = RetrieveContact(id);
    return View(c);
}

[ActionName("POST")]
public ActionResult EditContact(int id, Contact c)
{
    SaveContact(c);
    return View(c);
}
```

A. Option A B. Option B C. Option C
 D. Option D Answer: AC QUESTION 5 Drag and Drop Question You are developing a WCF service. You need to implement transport security by using NTLM authentication and NetTcpBindings. Which configuration values should you use? (To answer, drag the appropriate configuration values to the correct location or locations in the answer area. Each configuration value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Configuration Values	Answer Area
binding="netTcpBinding"	<system.serviceModel> <protocolMapping>
binding="Duplex"	<add scheme="https" />
binding="NtlmTcp"	</protocolMapping>
mode="netBindingTop"	<bindings>
mode="Transport"	<binding />
mode="Duplex"	</binding>
clientCredentialType="netTcpBinding"	<security />
clientCredentialType="NtlmTcp"	<transport />
clientCredentialType="Ntlm"	</security>
	</binding>
	</netTcpBinding>
	</bindings>
	</system.serviceModel>

Answer:

The screenshot shows a question with four options for binding configuration. The correct answer is the one with mode="Transport" and clientCredentialType="Ntlm". The answer area displays the following XML code:

```
<system.serviceModel>
  <protocolMapping>
    <add scheme="https" binding="netTopBinding" />
  </protocolMapping>
  <bindings>
    <binding base="http" bindingConfiguration="netBinding" clientCredentialType="Ntlm" />
  </bindings>
  <security mode="Transport" />
  <transport clientCredentialType="Ntlm" />
</system.serviceModel>
```

QUESTION 6 You are developing an order processing application that uses the ADO.NET Entity Framework against a SQL Server database. Lazy loading has been disabled. The application displays orders and their associated order details. Order details are filtered based on the category of the product in each order. The Order class is shown below.

```
public partial class Order
{
    ...
    public int OrderID { get; set; }
    ...
    public virtual ICollection<OrderDetail> OrderDe
    ...
}
```

You need to return orders with their filtered list of order details included in a single round trip to the database. Which code segment should you use?

- A. `var orders = db.Orders.SelectMany(o => o.OrderDetails.
 Where(od => od.Product.Category.CategoryName == categoryName)).
 Select(od => new { order = od.Order, detail = od }).ToList().
 Select(r => r.order);`
- B. `var orderDetails = db.Orders.SelectMany(o => o.OrderDetails.
 Where(od => od.Product.Category.CategoryName == categoryName));
 List<int> orderIDs = orderDetails.Select(od => od.OrderID).ToList();
 var orders = db.Orders.Where(o => orderIDs.Contains(o.OrderID));
 var orders = db.Orders.SelectMany(o => o.OrderDetails.
 Where(od => od.Product.Category.CategoryName == categoryName)).ToList();
 List<int> orderIDs = orderDetails.Select(od => od.OrderID).ToList();
 var orders = db.Orders.Where(o => orderIDs.Contains(o.OrderID));`
- C. `var orderDetails = db.Orders.SelectMany(o => o.OrderDetails.
 Where(od => od.Product.Category.CategoryName == categoryName)).ToList();
 List<int> orderIDs = orderDetails.Select(od => od.OrderID).ToList();
 var orders = db.Orders.Where(o => orderIDs.Contains(o.OrderID));`
- D. `var orders = db.Orders.SelectMany(o => o.OrderDetails.
 Where(od => od.Product.Category.CategoryName == categoryName)).
 Select(od => new { order = od.Order, detail = od }).
 Select(r => r.order);`

A. Option A B. Option B C. Option C D. Option D Answer: C Thank You for Trying Our Product, PassLeader Certification Exam Features: ? More than 99,900 Satisfied Customers Worldwide. ? Average 99.9% Success Rate. ? Free Update to match latest and real exam scenarios. ? Instant Download Access! No Setup required. ? Questions & Answers are downloadable in PDF format and VCE test engine format. ? Multi-Platform capabilities - Windows, Laptop, Mac, Android, iPhone, iPod, iPad. ? 100% Guaranteed Success or 100% Money Back Guarantee. ? Fast, helpful support 24x7.
