http://www.msexchange.org/articles_tutorials/exchange-server-2010/security-messagehygiene/exchange-2010-domain-security-part1.html QUESTION 165You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. The organization contains 50 Hub Transport servers. You need to minimize the amount of disk space used on the Hub Transport servers to store shadow copies of messages. What should you do? A.   From the Exchange Management Shell, run set-transportconfig cmdletB.   From the Exchange Management Shell, run set-transportservers cmdletC.   From the Exchange Management Console (EMC), modify transport settingsD.   From the Exchange Management Console (EMC), modify properties of Hub Transport Servers Answer: A QUESTION 166You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. The network contains two Active Directory sites named Site1 and Site2. Only Site1 is connected to the Internet. Site1 contains five Client Access servers and a Client Access server array named array1.contoso.com. Users connect to their mailboxes by using Outlook Web App (OWA) from the internal network and from the Internet. You plan to deploy two Client Access servers and a Client Access server array in Site2. You need to configure the namespaces for the OWA virtual directories. What should you do on all of the Client Access servers in Site2? A.   Set the InternalURL to array2.contoso.com. Set the ExternalURL to array1.contoso.com.B.   Set the InternalURL to the Client Acess server name. Set the ExternalURL to array1.contoso.com.C.   Set the InternalURL to the Client Access server name. Set the ExternalURL to $null.D.   Set the InternalURL to array2.contoso.com. Set the ExternalURL to $null. Answer: AExplanation:We have an array in Site2, therefore we would need to set the InternalURL to the name of the array. We can assume the array's name will be array2.contoso.com.Reference: http://technet.microsoft.com/en-us/library/bb310763.aspx (Proxying with Network Load Balancing) QUESTION 167An organization has Exchange Server 2010 Mailbox Server named Server 1 failed. A new server with Windows 2008 named Server 2.

Exchange Server 2010 recovery installation. What should you do before you perform recovery installation? A.   Rename Server1 computer account to Server2. Join Server2 to domain.B.   Rename Server2 as Server1. Reset the Server1 computer account. Join Server1 to domain.C.   Delete computer account for Server1. Join Server2 to domain. Rename Server2 as Server1.D.   Delete computer account for Server1. Rename Server2 as Server1. Create a New Computer account for Server1. Join Server1 to domain. Answer: B QUESTION 168An organization called contoso.com has Exchange Server 2010. @contoso.com e-mail address suffix.
