QUESTION 21 Scenario: A server farm has three policies applied using the User filter. - Policy A (priority 1) denies domain users access to client and removable drives. No other settings are configured. - Policy B (priority 2) allows domain users to access optical drives. No other settings are configured. - Policy C (priority 3) allows domain users to access network, client and removable drives. No other settings are configured. Which drives will be available to a domain user in the environment?

A. No drives B. Network drives C. Network and optical drives D. Network, client and removable drives E. Network, client, removable and optical drives

Answer: C QUESTION 22 Scenario: Management requires that video conferencing is implemented on all of the desktops, including video, sound and a webcam, in the three training rooms on the education floor of the corporate building. Quality is of very high importance. The IT department decided to implement video conferencing using XenApp. Multimedia conferencing and Windows Media Redirection have been enabled and configured for the XenApp servers. The latest Citrix Receiver for Windows is installed on all of the desktops. Which three steps should the administrator take to meet the needs of the scenario? (Choose three) A. Publish Microsoft Office Premium 2007 in the XenApp farm. B. Publish Microsoft Office Communicator 2007 in the XenApp farm. C. Install Microsoft Office Communicator Server 2007 on a XenApp server. D. Install one webcam on each desktop and use the manufacture's drivers. E. Install one webcam on each desktop and let Windows find the appropriate driver. F. Install Microsoft Office Communication Server 2007 on a server that is NOT running XenApp. Answer: BDF

QUESTION 23 A Citrix XenApp administrator needs to apply a policy to all users regardless of connection type. Which type of policy should the administrator create? A. Unfiltered User policy B. Unfiltered Computer policy C. User policy filtered by worker group D. Computer policy filtered by worker group Answer: A QUESTION 24 Scenario: A Citrix administrator manages a XenApp farm and applications are delivered through one Web interface. The administrator is required to apply a policy to all users accessing the XenApp farm through the Web Interface. The administrator should filter the required User policy by \_\_\_\_\_ .

A. User B. Group C. Client Name D. Worker Group Answer: C QUESTION 25 Scenario: A XenApp administrator needs to publish an application that will be streamed to traveling users so they launch the application when they are NOT connected to the network. The administrator also needs to provide the published application over an ICA connection. The user devices have been equipped with the appropriate plug-ins. Which setting should the administrator choose when publishing the application? A. Streamed to client B. Installed application C. Accessed from a server D. Streamed if possible, otherwise accessed from a server Answer: D

QUESTION 26 Scenario: A XenApp administrator has been tasked with delivering a new application to the traveling sales force. The sales force will require access to applications even when they do NOT have internal or network access. Which three steps are required to ensure that the sales force can access their applications at all times? (Choose three.) A. Install the offline plug-in on the servers. B. Publish the application as streamed to client. C. Install the offline plug-in on the sales force laptops. D. Install the online plug-in on the sales force laptops. E. Publish the application as accessed from a server, streamed to server. F. Publish the application as accessed from a server, installed application. Answer: BCD

QUESTION 27 Scenario: A company has published a CRM application to the Sales staff. The Sales staff consists of people from different countries, and some of the staff uses a localized version of the operating system. When launching the application the users get the following error. -- This application is NOT profiled for operating system language <language> Which action can an administrator take to resolve this issue when profiling the streaming application? A. Use a localized version of the software. B. Add a target for the particular operating system language. C. Use the 'Select files folders' feature in Advanced Installed to copy localized language file into the package. D. Use the 'Edit registry' feature in Advanced Installed to change system locale settings in the registry to match the settings needed. Answer: B

QUESTION 28 Scenario: Users in an environment connect to the XenApp farm Linux based thin clients. They reported that they are NOT able to access the computer-based training course hosted on the XenApp server in the Microsoft Media Format (MMS). Windows-based users are NOT reporting this issue. What could the administrator do to resolve this issue? A. Disable host (server) to client redirection. B. Request the Linux thin clients to use the Java client. C. Ensure these thin clients

QUESTION 29 Scenario: A Citrix administrator manages a XenApp farm and applications are delivered through one Web interface. The administrator is required to apply a policy to all users accessing the XenApp farm through the Web Interface. The administrator should filter the required User policy by \_\_\_\_\_ .

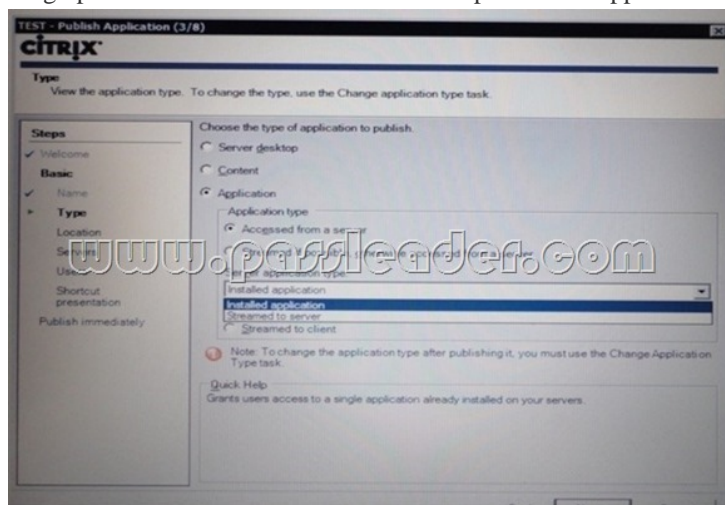

A. User B. Group C. Client Name D. Worker Group Answer: C QUESTION 30 Scenario: A XenApp administrator needs to publish an application that will be streamed to traveling users so they launch the application when they are NOT connected to the network. The administrator also needs to provide the published application over an ICA connection. The user devices have been equipped with the appropriate plug-ins. Which setting should the administrator choose when publishing the application? A. Streamed to client B. Installed application C. Accessed from a server D. Streamed if possible, otherwise accessed from a server Answer: D

QUESTION 31 Scenario: A XenApp administrator has been tasked with delivering a new application to the traveling sales force. The sales force will require access to applications even when they do NOT have internal or network access. Which three steps are required to ensure that the sales force can access their applications at all times? (Choose three.) A. Install the offline plug-in on the servers. B. Publish the application as streamed to client. C. Install the offline plug-in on the sales force laptops. D. Install the online plug-in on the sales force laptops. E. Publish the application as accessed from a server, streamed to server. F. Publish the application as accessed from a server, installed application. Answer: BCD

QUESTION 32 Scenario: A company has published a CRM application to the Sales staff. The Sales staff consists of people from different countries, and some of the staff uses a localized version of the operating system. When launching the application the users get the following error. -- This application is NOT profiled for operating system language <language> Which action can an administrator take to resolve this issue when profiling the streaming application? A. Use a localized version of the software. B. Add a target for the particular operating system language. C. Use the 'Select files folders' feature in Advanced Installed to copy localized language file into the package. D. Use the 'Edit registry' feature in Advanced Installed to change system locale settings in the registry to match the settings needed. Answer: B

QUESTION 33 Scenario: Users in an environment connect to the XenApp farm Linux based thin clients. They reported that they are NOT able to access the computer-based training course hosted on the XenApp server in the Microsoft Media Format (MMS). Windows-based users are NOT reporting this issue. What could the administrator do to resolve this issue? A. Disable host (server) to client redirection. B. Request the Linux thin clients to use the Java client. C. Ensure these thin clients

have the latest receiver client for Linux. D. Create a XenApp policy to enable HDX Flash redirection for the Linux thin clients. Answer: A QUESTION 29 Scenario: An administrator is in the process of profiling a streaming package. The application needs unique user updates on a regular basis. How can the administrator minimize his workload when updating the streaming package? A. Enable user updates to allow users to download applications from the Internet and store them in the user's root. B. Enable user updates to allow users to send update requests notifications to the administrator building the packages. C. Enable user updates to allow users the ability to update the streaming package with changes they make themselves. D. Enable user updates to allow users to update the main streaming package with changes that other users can benefit from. Answer: A QUESTION 30 Scenario: A XenApp administrator is tasked with delivering a new application to the XenApp farm. During testing, the administrator finds that the application is incompatible with existing applications installed on the XenApp servers. He CANNOT install the application on the servers. The administrator is in the process of publishing this application. Click the 'Exhibit' button to view a screenshot of the Publish Application window. Which streaming option should the administrator use to publish the application so that iPhone mobile device users can access the application?

A. Streamed to client B. Accessed from a server - Streamed to server  
C. Accessed from a server - Installed application D. Streamed it possible, otherwise accessed from a server Answer: B

<http://www.passleader.com/1y0-a20.html> QUESTION 31 Which steps should an administrator take to publish applications that will be accessed through Web Interface and presented in different folders? A. Publish the applications as Content instead of Applications. B. Create a folder under the Application node and put the specific application in the folder. C. In the application properties, in the location section, change the working directory to match the folder name. D. In the application properties, in the Shortcut presentation section, fill in a name for the Client application folder. Answer: D QUESTION 32 Users in an environment need to be able to open Microsoft Office documents using the software installed on the XenApp server even if the user has NOT started a Citrix session. What must the administrator configure to meet the requirements of the scenario? A. Offline streaming B. File Type Association C. Host (server) to client redirection D. Client to host (server) redirection Answer: D QUESTION 33 Scenario: A Citrix administrator manages a mixed environment consisting of desktops, XenApp and XenDesktop. Management desires that: - login times be decreased - user profiles are stored in a centralized location - user changes be saved - user changes be made available to user sessions accessed from any desktop, XenApp server or XenDesktop connection Based on these requirements, which type of profile should the administrator implement? A. Local B. Roaming C. Mandatory D. Citrix Profile Management Answer: D QUESTION 34 Scenario: An administrator is setting up access for the User Support team. The administrator wants to give this team access to manage user sessions so that they can disconnect and either clear or log-off user sessions for troubleshooting purposes. Which node would the administrator use in

order to delegate these permissions in the AppCenter? A. Policies B. Servers C. Applications D. Administrators Answer: D QUESTION 35 Scenario: An administrator receives word that the IT Manager wants the Domain Admin group to have rights within the XenApp farm to help support the infrastructure. The administrator agrees but wants to restrict them from publishing applications. In which two ways could the administrator set these permissions? (Choose two.) A. Map the Domain Admin's Active Directory group to a Custom Administrator's role in the AppCenter and remove the Publish Application. B. Add Each Domain Admin's Active Directory account to a Full Administrator's role in the AppCenter and remove the Publish Application. C. Map the Domain Admin's Active Directory group to a Full Administrator's role in the AppCenter and uncheck remove the entire Publish Application. D. Create a Custom Administrators group in Active Directory, map that to a Custom Administrator's role in the AppCenter remove the Publish Application. Answer: AD QUESTION 36 A XenApp administrator discovers that a XenApp server which was previously deleted from the AppCenter is still listed in the console. Which command can the administrator run to force removal of the erroneous server record? A. dscheck B. dscheck /clean C. dsmaint recover D. dsmaint recreatelhc Answer: B QUESTION 37 An administrator wants to configure configuration logging for two XenApp farms. Which two tasks must the administrator configure to accomplish this? (Choose two.) A. Configure separate MS SQL databases for each XenApp farm B. Configure one MS SQL database for both XenApp farms to connect to C. Enable configuration logging for each farm and connect to a single database. D. Enable configuration logging for each farm and connect to two separate databases Answer: AD QUESTION 38 Scenario: An administrator has published Microsoft Excel on two identical servers and has placed those servers in a worker group. There are 150 users in the environment, and each server must be allowed to accept all 150-user sessions for failover purposes. All users start work at 09:00 in the morning. The administrator also wants to prevent the servers from failing due to excessive connection attempts during this logon time. What can the administrator do to ensure that the server farm can meet these requirements? A. Assign the default load evaluator to the worker group. B. Assign the advanced load evaluator to the worker group. C. Create a load balancing policy and assign it to the worker group. D. Create a custom load evaluator and assign it to the worker group. Answer: D QUESTION 39 Scenario: A server farm consists of dual and single processor servers. The administrator wants to ensure that the dual-processor servers receive more sessions than the single-processor servers. In addition the administrator wants to ensure that no server receives more than 100 user sessions. In order to meet these requirements, the administrator must assign the\_\_\_\_\_. (Choose the correct option to complete the sentence.) A. custom load evaluator rule to all servers. B. advanced load evaluator rule to all servers C. custom load evaluator role to all dual processor servers D. advanced load evaluator rule to all dual-processor servers Answer: A QUESTION 40 Scenario: An administrator wants users in their two regions to utilize the XenApp servers in their own region to get the best performance from their applications but automatically fail over to the alternate region. The administrator creates an Active Directory group for each region. The administrator should create\_\_\_\_\_ and\_\_\_\_\_ (Choose the correct option to complete the sentence.) A. one worker group, one load balancing policy B. two worker groups, one load balancing policy C. one worker group, two load balancing policies D. two worker groups, two load balancing policies Answer: D
